

LAW ENFORCEMENT MANAGEMENT SYSTEM (LEMS)
Parking Tickets

The Parking Ticket Control System is a system that allows for the entry of parking ticket information and allows your department to print out and inquire into this information in a demand environment.

SYSTEM HIGHLIGHTS:

- The PARKING TICKET CONTROL system was designed to allow for recording of parking ticket information in an "on-line" interactive environment. The system was designed to function in this manner:
 - A book of tickets is issued to individual officers and those beginning and ending ticket numbers are recorded in the computer.
 - At the end of the day/week, tickets are returned by the officer and entered into the computer. The tickets are entered back into the computer system whether they were actually issued or voided/excused to maintain a full accounting of the tickets.
 - A "warning" report is to be printed identifying all tickets that have become past due. Warning name/address information is then entered into the computer to be able to print the "warning" forms.
- Prints the following Management reports:
 - Parking Violations by Citation number.
 - Parking Violations by issuing officer.
 - Parking Violations by location.
 - Parking Violations by violation date.
 - Parking Violations needing warnings.
 - Parking Violations exceeding maximum warnings.
 - Daily log of citations issued, paid, voided or excused.
